

Task 1 response example

Your Response

The diagram describes about how to make bricks.

First of all, a digger digs clay, and the clay was put on the metal grid. Then the clay was crushed on the roller.

Secondly, the crushed clay is mixed with sand and water, and it will be formed as square. There are two ways to make form of bricks. One way is using a mould, and the other way is cutting by using a wire cutter.

Thirdly, the bricks are dried in the oven for 24 to 48 hours. After finishing drying, they are moderated with the temperature of 200-980 degrees in the kiln. Then they receive a higher temperature of 870-1300 degrees. After that, they enter into the cooling chamber for 48-72 hours.

Finally, those bricks are packaged and delivered to customers.
